

## FILTER SERIES 11132XX

#### STEEL-BODIED HIGH-PRESSURE FILTER

These filters are available with and without fixing holes and can reach a maximum pressure of 500 bar. (The maximum pressure refers to sealing pressure of the assembly.)

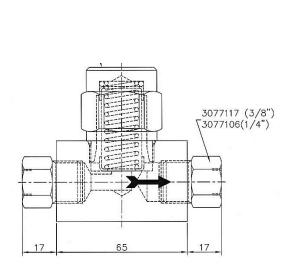

A elevated differential pressure between the inlet holes and outlet holes may cause damage to the filter.

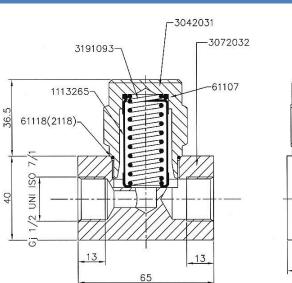

It is therefore recommended to regularly inspect the filter to check for possible clogging.

During installation of the lubrication system, it is easy for foreign particles to remain in the lines.

## WITHOUT FIXING HOLES
